Hearing Health™

A Complete Daily Supplement - Information & Directions

WHAT TO EXPECT

- Hearing Health is a complete daily micronutrient supplement formulated with specific ingredients that may support:
 - **Improvement In Hearing Health**
 - **Reduction In Ringing In The Ear (Tinnitus)**
 - **Increase In Immune System Function**
 - **Reduction Of Inflammation**
 - **Increase In Energy**
 - **Improvement In Overall Health**
- **Since Hearing Health is a complete daily supplement – no other additional daily vitamins should be taken.**
- Most reduced ringing in the ear and improved hearing results may be noticed within the first three to six months. Continued use will help provide ongoing protection. Remember your hearing damage occurred over a long period of time therefore continued supplement protection is necessary for best results.
- **For maximum safety, Hearing Health does not include any herbal ingredients, heavy metals (e.g. zirconium, molybdenum, vanadium) or unnecessary ingredients (e.g. PABA, inositol, choline).**

SCIENTIFIC STUDY

The PMC formulation was evaluated in collaboration with the Naval Medical Center in San Diego. U.S. Marine personnel with

balance disorders from blast-related head injuries in Iraq were treated in the Spatial Orientation Laboratory. A 12-week randomized, prospective, blinded study was completed comparing standard therapy to standard therapy plus the micronutrient

The study included several measuring techniques for hearing and balance, and the micronutrient treated group performed better on all measures than the untreated group. There were no adverse effects from the PMC formulation. Scientifically speaking, the micronutrient group had significantly better scores on sensory organization and higher scores in all other measures.

Scientific Research With:

THE PMC STORY

Premier Micronutrient Corporation (PMC) antioxidant scientists have completed several studies that demonstrate reduction of oxidative damage and inflammation and improvement in immune function. The PMC formulation is a unique, proprietary micronutrient combination based on the highest level of antioxidant

science. It has been studied with federal laboratories and military institutes and has been shown to be effective against oxidative damage from several sources. It is well documented that increased oxidative stress and acute or chronic inflammation are major factors in the initiation and/or progression of several diseases such as diabetes, cancer, heart disease and hearing problems. They are also involved in aging processes. Antioxidants at appropriate doses and dose schedules can neutralize free radicals as well as reduce inflammation; therefore, they can be helpful in a variety of adverse health conditions.

PMC conducts important studies with the Office of Naval Research (Arlington, VA), Naval Medical Center (Balboa, CA), Marine Corps Systems Command (Quantico, VA), Naval Health Research Center (San Diego, CA), NASA (Houston, TX), Naval Medical Research Center (Silver Spring, MD) and U.S. Army Medical Research Institute of Chemical Defense (Aberdeen Proving Grounds, MD).

TESTIMONIALS

“The EAR Foundation Executive Board voted to partner with PMC, this being *the first micronutrient supplement ever to be accepted by this foundation in its 36 year history.* As an audiologist, I am excited with the potential that these supplements will provide relief to our patients with chronic tinnitus. Any help with the battle of tinnitus will greatly be appreciated. We look forward to opening a new frontier for the hearing-impaired”. – **Ann B. Sitton, M.S., FCCC-A, Audiologist**

“PMC has developed a *truly profound breakthrough in the use of micronutrient/ supplements in treating chronic tinnitus suffers* and promoting overall hearing health.

This is the first and only supplement the EAR Foundation has ever endorsed.

It's that good.” – **Steve Masie, Chairman of the EAR Foundation Board of Directors**

“As a hearing health care professional, I am well aware of the morbidity associated with occupational or injury-related hearing loss, tinnitus and balance disorders. I have recently had a beneficial experience with PMC's antioxidant protocol in diminishing the intensity of my own long-standing tinnitus.

I encourage other hearing health care professionals to evaluate these formulations in their own practices.” – **Eugene Flaum, M.D.**

Former Chief of Otolaryngology at Cedar Sinai Hospital, Los Angeles, CA

“I am very pleased to report substantial reduction in the loudness level of my tinnitus after taking Hearing Health.

Before I started the supplements, the tinnitus in my left ear was so loud I could hear it well above the road noise and radio in my car while on the highway. Occasionally I have to really listen to make sure it is still there! JOY!!!”

- **Jewell Baggett-Strehlau Au.D.**
